

THINIX TOUCH™ - CASE STUDY

Vehicular PC Running Thinix Touch™

ABSTRACT

Thinix Touch is ideal for many situations. Vehicular PC's running Windows can utilize Thinix Touch to make the experience fun and very easy to use.

In this case, a vehicular PC with Thinix applied to it would have the user's most common applications on it. This would be ideal for easy navigation, OnStar, connection of an iPhone or iPod, an audio library, etc. Touch allows all of this to be accomplished quickly and easily, hiding non-necessary system components and providing a simple user interface for the operator.

KEY POINTS

- Easy-to-use, branded interface for the user.
- The Quick-Edit feature is turned on to enable the user to easily change the applications they prefer to be on the screen.
- A PIN-code protected "Administration" section is included that contains applications that are not readily available to normal users of the vehicular device and includes items such as Control Panel, Task Manager, and the command line.
- Additionally, 'tabs' with other applications can be added, which also have the option to be pin-code protected.
- A digital clock application can be added by downloading it here: www.thinix.com/touch. The file is called Thinix_DigitalClock_v1.2.zip.

DETAILS

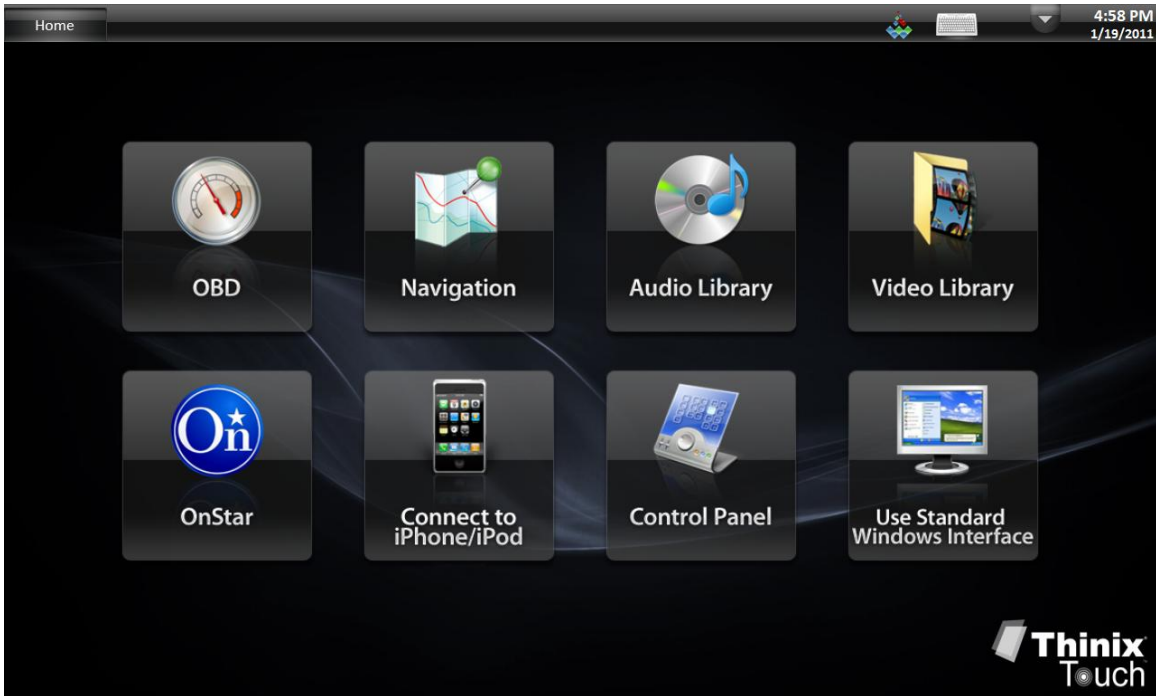

Thinix Touch Version:	6.2.5000
Download:	http://www.thinix.com/_documents/Example Theme - Vehicular PC.zip
Date:	January 19, 2010

SCREENSHOTS

The user can freely access the tab and more tabs can be added if desired.

A pin-code must be entered to access the Admin tab.

The administration section allows you to access applications that other users cannot.

An additional application can be downloaded to enable a digital clock on the screen. Go to www.thinix.com/touch to download the file named Thinix_DigitalClock_v1.2.zip.
