Reviewer's Guide

For Thinix Touch 6.2 and Thinix MyMashup

Please use the following Guide in order to complete a quick demonstration of Thinix Touch™ and Thinix MyMashup™. For more detailed information, or assistance, please visit www.thinix.com.

1) **Installing Thinix Touch and MyMashup, recommended procedure**
   - Installation on computers running Microsoft Windows XP and 7.
     1. Pre-installation recommendations:
        (a) Create a system backup and/or create a system restore point
        (b) Create a new user account: (optional)

           Name: Thinix

           Password: (Set whatever password you desire)

           Set the user to be Administrator
        (c) Logoff and then Login as the Thinix User
           (a) Download and Run the Thinix MyMashup™ Installer
           (b) Download and Run the Thinix Touch™ Installer
              (i) You will be prompted for a number of questions. Recommended options are to take the default settings and answer Yes to all questions. You can change settings at a later date as needed.
           (c) Upon completion, you will have a Thinix Touch icon on your desktop
           (d) If you have questions during the installation of Thinix Touch, please see the Installation Guide on www.thinix.com/touch

2) **Running Thinix Touch for the first time:**
   - Click the icon on the screen that says Thinix Touch. This will close the standard Windows user interface and will launch Thinix Touch.

3) **Exploring the features of Thinix Touch**
   - General Navigation
     1. Applications are grouped and organized into 'tabs' at the top of the screen.
        (a) Touch any tab to switch between groups of applications
     2. You can use gestures to switch between 'tabs'.
        (a) In the area below the tabs you can drag your finger (swipe left or swipe right) to move between tabs.
     3. Although this feature is automatic now, you can also gesture down on any tab to launch the tab's z-menu.

(a) Touch any tab and swipe your finger down. This launches a z-menu on top of any other window. Click the title bar of Thinix Touch or in an empty screen area to close the z-menu, or just wait and the z-menu will timeout and close automatically.

- Thinix Virtual Keyboard
  1. Tap any application to open it.
  2. Touch maximize icon in the applications title bar to make it appear full screen
  3. Touch the keyboard icon to launch the Virtual Keyboard, it will resize accordingly to your application
  4. Simply touch the keyboard with your finger to type
  5. When finished, close it by pressing the keyboard icon at the top of the screen or the close icon on the lower right side of the keyboard.
  6. Close the application

- Multitasking (switching between running applications)
  1. Tap any application to open
  2. Touch the minimize icon in the applications title bar, it will then go to the bottom of the screen known as the Thinix AppDock™
  3. Tap a second application to open
  4. Touch the minimize icon in the applications title bar
  5. To restore either of the minimized applications, simply touch the small icon in the AppDock™

- Use Z-Menus to open an application while another application is full-screen
  1. Tap any application to open
  2. Touch the maximize icon in the applications title bar
  3. Tap any tab at the top of the screen
  4. Touch the minimize icon in the applications title bar
  5. Touch either icon in the Thinix AppDock™ to restore the window

- Use Thinix MyMashup™ to personalize your device
  1. Touch the icon next to the Virtual Keyboard at the top right of your screen
  2. Thinix MyMashup will open. This application is to enable you to create your own buttons for whatever applications you use most
  3. Touch the very left, top icon to access the settings window
     (a) Here you can change the configuration mode to normal, move, delete, or edit mode
     (b) Change button size to small, medium or large
     (c) Decipher what action applies after touch/click; close, minimize or do nothing
     (d) Change background image
  4. The icon next to the settings icon is to add a button
     (a) Options to add are: file, folder, blank and website
  5. Click and hold any button for 3 seconds to change the name, action and image

- Explore Shutdown options
  1. Various options exist to allow you to:
     (a) Cancel, return to the current session

(b) Return to Windows (leave all your applications running while the shell is returned to a standard Windows shell)

(c) Sleep (go to low power state)

(d) Logoff

(e) Restart

(f) Shutdown

4) **Configuring Thinix Touch (Basic):**

- After installation, Thinix Touch can be configured by running the configuration utility by clicking an icon on the desktop called "Thinix Touch Configuration"

- The configuration tool is used to set which icons appear, which tabs appear, set security preferences, background images, colors, etc.

- Refer to Thinix Touch user manual for detailed description of the features of Thinix Touch Configuration Utility.
