

Senior Care Communications

Connecting Senior Care Residents With Family & Friends

Transforming Communication For Seniors

Staying connected with friends and family is critical for seniors. With the challenges presented by social distancing efforts due to COVID-19, the Internet and social media are more important than ever. This is why Thinix, a long-time leader in secure computing and kiosks, has designed an easy way for seniors and residents of assisted living facilities to keep in touch with loved ones using secure tablet devices that can be sanitized for safety.

With obvious mental stimulation benefits, mobile iPads act as a tool that benefits staff as well as residents. In a COVID-cautious environment, iPads also serve as a critical safety measure to reduce seniors' exposure to outside visitors. By providing senior care communications with iPads kiosks, Thinix can quickly help any facility transform their senior's experience into a happy and healthy one. Our managed devices keep lines of communication open so that seniors can regularly reach out to family members and telehealth doctors. We've designed our iPad kiosks to be easy to use – regardless of the senior's comfort level with using technology.

Integrated Hardware & Software Security

Security protocols and regular updates are built into every Thinix managed kiosk to ensure reliable operation is maintained. Our iPad kiosks have a variety of form factors, including a mounted option on a secure, medical-grade cart that's great for on-the-go transportation. Being mobile means that care teams can spend more time with residents, and provide a handful of crucial devices that serve the entire facility.

Video Communication

Education & Entertainment

Designed For Ease Of Use

The mobile cart option has wheels that can be locked to keep the kiosk in place, and because the tablet is mounted on the cart, residents don't have to worry about holding it during a video call, which helps improve the quality of the call.

The cart also conceals the cables to prevent tripping hazards. Users can tilt, pan, and rotate the tablet too. On some carts, users can also adjust the height of the tablet for better viewing options.

Key Features

Easy To Use

Multiple Applications For Stationary & On-The-Go

Video Conferencing

Medical-Grade Carts

Versatile, All-in-One Access

Social Interaction

FamilySafe Content Filtering
