

### Security Enhancements

- Steel Kensington combination locking cable
- Rubber port plugs block unused USB & other ports
- Secure anchor plate

## Guest-Use PC Enhancements

### Add Another Level Of Security To Your PCs

At Thinix we often focus on built-in, military-grade security for all our PCs, but physically securing guest-use PCs is equally important. Guest-use PCs may fall victim to theft. We frequently see guests connect to USB ports to charge cell phones, or see gum or other items jammed into open ports. We have assembled inexpensive items that allow you to effectively secure your guest PCs.

Lock down your PCs and multiple peripherals with one convenient kit. Thinix offers secure Guest-Use PC Enhancement Kits to ensure that your Guest PCs remain as secure as ever. Our optional secure enhancement kit contains a steel Kensington locking cable and secure

anchor plate (which is mounted to the desk or to a wall) to prevent the theft of your Guest PC, and rubber port plugs for all unused ports – preventing people from plugging into the SD and USB slots, or from putting things like incorrect cables, paperclips, and gum in the open ports. This universal security enhancement kit offers a flexible, affordable method to protect any system and its components.

### Know That Your PC Is Secure

Take the extra step today, and ask how you can include a secure enhancement kit with your new or existing PCs.
