

## Thinix FamilySafe® WiFi

### Industry Leading Managed Property WiFi

Access Point

Marketing differentiation is critical to all businesses. Offering amenities that put your apartments a head-and-shoulders above the competition is a marketing strategy that works – without question. It’s no secret that in today’s environment, people expect WiFi as the norm. With 77 million tech-savvy Millennials (ages 18-36) entering the apartment market, they are transforming the demand for technology-oriented amenities in both private and shared residential spaces. According to “ApartmentNext,” 8 out of 10 residents in a recent survey responded by ranking Internet services as their #1 amenity choice. Results revealed residents are most concerned with Internet services in their apartment community, and apartment WiFi is the top amenity on their “wish list.”

Thinix offers the most advanced program for quickly deploying a guest network to a property – complete with enterprise-grade gateways, lightning-fast Internet, dual-band access points, cloud monitoring, and 24/7/365 GuestFirst™ Support. Thinix customizes right-sized WiFi solutions for all types of properties. FamilySafe® WiFi, with optional client-isolation, works to protect WiFi

users by preventing the spread of viruses, malware, and malicious content from neighbor to neighbor connections, making it one of the most security conscious managed WiFi options on the market today.

### Investing In Your Property Is Important, But Investing In Your Residents Is Essential

Another top priority for the engineers at Thinix is WiFi performance. High-speed access to the Internet for information and entertainment is an integral part of the lives of more and more renters. Dense, bandwidth-intensive content such as YouTube videos, movies, and video games is a given for the needs of multiple users. Thinix delivers fast, reliable, cost-friendly WiFi solutions to keep your WiFi users happy. With complete integration capabilities, users can experience custom engineered WiFi solutions, strong connections, property-wide roaming without WiFi interruptions, enterprise-grade equipment from leading vendors, and 24/7/365 Thinix GuestFirst™ support.

## Thinix FamilySafe WiFi Security Difference

The need for WiFi solutions that protect guests from potential threats has grown. Thinix FamilySafe WiFi protects your users like family. FamilySafe WiFi, with optional client-isolation, protects residents by preventing the spread of viruses, malware, and malicious content from neighbor to neighbor connections within a property's network. FamilySafe WiFi keeps users devices and private information much safer than in a traditional network setting where client-isolation protections are non-existent. FamilySafe WiFi solutions also include additional features such as optional WiFi filtering and content blocking, so your users may connect safely.
