

# Thinix Secure PCs & Internet Kiosks

## Fully Managed, All-In-One PCs

### Revolutionizing Secure Computing

Every day at businesses around the world, employees clock-in and head directly to the floor, truck, line, or post. These businesses encompass environments such as healthcare, retail, manufacturing, and government, of which, roughly 30 to 40% of employees do not have daily access to a computer. Thinix is ready to close that gap by helping you empower your employees and your business with access to a secure, simple, and fully managed PC or kiosk system.

By providing a self-service PC or kiosk, Thinix connects users to a trusted device that is kept separate from your network — mitigating security threats that might otherwise be introduced in a traditional PC setting. Systems are fully backed by Thinix GuestFirst™ Support team, who provide proactive software updates and technical support. Our Thinix Secure PCs and Kiosks also utilize advanced security software to safeguard user privacy, business privacy, and ensure reliable operation.

### Integrated Security & User Protection

#### System Protection:

Security and patch management is built into every Thinix Secure PC or Kiosk at no additional charge to ensure user privacy is safeguarded and reliable PC operation is maintained.

#### Network Protection:

FamilySafe® WiFi can be effortlessly integrated with any of our Secure PCs or Kiosks to provide optional client-isolation which prevents the lateral spread of malware, ransomware, and malicious content between users on your network.

#### User Protection:

Each Secure PC or Kiosk has built-in Thinix All-Clear™, which securely deletes browsing history and files, guaranteeing a safe experience for all of your users.

## Agile Self-Service Systems

Our Secure PCs and Kiosks are self-service systems used in industries such as manufacturing, retail, banking, restaurants, hospitality and more. The versatile all-in-one design of Thinix Secure PCs and Kiosks allows them to be customized for any number of environments. Some of our top application settings include locked-down employee training systems or self-service employee kiosks to access HR benefits, time sheets, and more. Thinix Secure PCs and Kiosks are also used in public spaces such as business lobbies, hotel lobbies, mobile healthcare applications, and in retail settings to connect employees and customers. Thinix has successfully helped businesses connect both their workforce and their customers.

---

### Main Features Include:

- Fully Branded:** Every Thinix PC or Kiosk is branded (at no extra charge) for the environment, complete with optimized interfaces for individual partner brand logos.
- Integrated Security:** With customizable restrictions and functions, our systems are locked-down, stopping cyber attacks and preventing your Thinix PCs and Kiosks from displaying inappropriate content, making them secure and incredibly reliable.
- Privacy Protection:** Failsafe Timeout ensures each user logs out when done, while Thinix All-Clear™ securely deletes browsing history and files after a user session finishes, delivering a safe experience for all of your guests.
- Preconfiguration:** Our user-friendly, enterprise-grade equipment comes preconfigured and is easily deployed so that your Secure PC or Kiosk is up and running in no time.
- Thinix GuestFirst™ Support:** To reduce your IT resource costs, our expert developers and technicians are available to help you with your Secure PC or Kiosk.
